For Grown-Ups: How to Use These Worksheets

For kindergarten to second grade. Two pages within 10 and two within 20, every problem different.

Why use it

Once your child knows addition and subtraction facts on their own, mixing them checks that your child reads the sign. Mixed pages are how schools check fluency: facts within 10 by the end of first grade, and within 20 from memory by the end of second (Common Core 1.OA.C.6 and 2.OA.B.2).

What it is good for

- Reading the sign before answering.
- Facts within 10, then within 20.
- A quick check of which facts are known and which still need work.

How to use it

1. Before your child starts, point out that every page has both signs.
2. Ask your child to touch the sign before writing each answer.
3. Note which facts take longest, and practice those on the addition or subtraction worksheets.
4. Check with the answer key. Each red number sits where your child writes it.

> **Try saying:** “Look at the sign first. Is this one adding or taking away?”

Tip: Speed is not the goal at first. A right answer your child can explain matters more than a fast guess.
