For Grown-Ups: How to Use These Worksheets

One page at a time, for kindergarten. Read each story aloud first, then let your child try reading it.

Why use it

Kindergartners solve story problems with objects or drawings (Common Core K.OA.A.2). Every animal in a story is drawn, so your child can count to solve it, even before reading. Putting two groups together is the first kind of story problem children meet, and the words are short enough for a beginning reader.

What it is good for

- Adding within 10 by counting two groups of pictures.
- Hearing how a story turns into adding.
- Reading short sentences with a picture beside each animal word.

How to use it

1. Read the story aloud, pointing to each word, or let your child read it.
2. Ask what your child has to find out: how many animals in all.
3. Let your child touch and count each picture, then write the number in the box.
4. Ask how they know, and count again together if the answer is off.
5. Check with the answer key, where the answers are in red.

> **Try saying:** “How many hens? How many dogs? How many animals is that in all?”

Tip: Act a story out with toys first, then do the same story on the page.
