	**8**	9	7
	2	3	**4**
	**10**	8	9
	5	**7**	8

For Grown-Ups: How to Use These Worksheets

A few minutes at a time, after counting real things together, with a pencil.

Why use it

Counting a set takes two ideas: one number for each thing, each counted once, and knowing that the last number said tells how many. Children recite numbers long before they count things, so crossing off each picture is the paper version of moving each counted toy aside.

What it is good for

- Pre-K and kindergarten: counting up to 10 pictures and saying how many.
- Pictures in a line first, then in two rows, then scattered, which is harder to keep track of.
- Every number from 1 to 10, more than once.

How to use it

1. Start with the page of pictures in a straight line, the easiest.
2. Your child touches each picture, says one number for it, and crosses it off.
3. At the end, say the last number again with the thing named: one, two, three, four. Four cars.
4. Your child circles that number from the three beside the row.
5. Check with the answer key, where each row is in the same order as on its page.

> **Try saying:** “Touch each one and cross it off as you count. What was the last number you said? So how many are there?”

Tip: A worksheet practices what your child has already done with real objects; it does not replace them.
