For Grown-Ups: How to Use These Worksheets

One page at a time, a few minutes a sitting. For third grade, once your child can round without drawing a line.

Why use it

Once the line is not needed, the rule is the fast way: look at the digit just to the right of the place you are rounding to. To the nearest hundred the tens digit decides, so 349 rounds to 300, not 400. A number exactly halfway rounds up, the convention US schools teach.

What it is good for

- Pages 1 and 2: two- and three-digit numbers to the nearest ten.
- Pages 3 and 4: numbers to the nearest hundred, including 38 to 0 and 72 to 100.
- Pages 5 and 6: each number rounded both ways, to show the difference.

How to use it

1. Start with the number line sheet if a page here is hard.
2. Do set A of one activity. Set B has the same numbers in a new order.
3. Find the place, look at the digit to its right, then round down or up.
4. Check one answer a page by drawing a short line between the two tens.
5. Check with the answer key, and do set B a few days later.

> **Try saying:** “Which digit decides? Is it 5 or more?”

Tip: Rounding down keeps the tens digit: 43 rounds to 40, never 30. If homework rounds a halfway number differently, follow the class.
