For Grown-Ups: How to Use These Worksheets

For late second grade and third grade, the first step. Each activity has two pages, the same facts in a new order.

Why use it

The 2, 5, and 10 times tables come first because children already count by 2s, 5s, and 10s. Together they cover 27 of the 55 different facts to 10 × 10. Third graders are expected to know every product of two one-digit numbers from memory by the end of the year (Common Core 3.OA.C.7), and each later table is built on these.

What it is good for

- Filling in the counts by 2s, 5s, and 10s, then finding each fact on its count.
- The three tables mixed, in both orders, such as 5 × 7 and 7 × 5.
- The missing number, such as 5 × □ = 35, which is the division fact.

How to use it

1. Say each count aloud together before your child fills in the gaps.
2. For 5 × 7, count seven 5s along the line: 5, 10, 15, 20, 25, 30, 35.
3. Say “seven tens” for 10 × 7, rather than “add a zero”.
4. Start untimed. Getting each fact right comes first, and speed later.
5. Check with the answer key. Each red number sits where your child writes it.

> **Try saying:** “8 and 8 is 16, so 2 eights is?”

Tip: Every 2s answer is even, and every 5s answer ends in 5 or 0: a quick way to check.
